

# ELECTRIC VEHICLE CHARGING

With private EV sales doubling year on year, and fleets moving to electric vehicles to improve sustainability and reduce operating costs.....

**Now is the time to plan your EV charging system**

**ARE YOU  
READY?**

## WE CAN HELP!

iDACS collaborate with you to deliver an intelligent Electric Vehicle charging system that's cost effective, energy efficient and easy to extend as demand increases!

*"The overall communication and service we received was great, and I would highly recommend iDAC Solutions to anyone looking at installing EV charging at their business."*

## How We Work With You

With nearly 40 years experience, iDACS provide unrivalled service and expertise. We **connect** all the elements required to deliver your solution smoothly; offering you a choice of chargers to suit your needs, technical advice, installation services (from our OZEV approved installers) and **support throughout every stage of the project.**

## Our EV Charging Solutions

- Our chargers offer smart functions to make charging **less expensive, more convenient and safer.**
- The load-balancing feature shares available power – allowing **multiple chargers to run on a single circuit.** All vehicles on charge will receive a top-up (meaning no disappointed tenants, guests or staff).
- Our IP rated, modular flat cabling solution (shown on right) takes **less time to install and enables simple additions** e.g. for landlords adding new tenants.
- All our chargers are **designed to protect the building's power supply**, preventing overloading of the system and potential power outages.
- Units can be **managed via a subscription-free App** (and software for our commercial units), allowing you to manage & schedule charging times, monitor energy costs and control user access.
- You can bill manually for charging using data from the standard App / software supplied, or using our automated add-on payment software
- The smart charger software updates automatically via WiFi, meaning your **chargers will always be current and offer the latest features**
- Our chargers **work with any plug-in car** and are eligible for the UK Government's OZEV EV Charging grant schemes.
- **Coloured chargers are available** for branding, designated users, etc.

*"The installation took less time to complete, required less components and will give our clients greater flexibility in the future. It is also very neat and looks great!"*

*Sean Dolan, Director of SED EV Charging*

Scalable load-balancing solutions

Manage access, charging and usage

The low-profile Hypervolt charger is compatible with your smart speaker... 'Alexa, schedule my car to charge over night.'  
.. and is supplied with a charging lead
