

EV CHARGING AUTOMATED BILLING SYSTEMS

Made easy by iDACS

Our smart EV charging systems have subscription-free Apps and software, enabling clients to view, manage & schedule charging; and set access to the chargers. However, if you're looking for a more sophisticated automated billing system for your business, we also have an add-on system that can offer greater functionality.

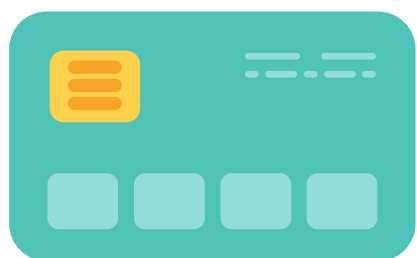

Whether you're a hotel operator wanting to charge guests for over-night use, or a landlord with resident and visitor parking bays, this solution offers an additional, and hassle-free way to earn extra revenue

Have the option of adding automated billing to the chargers. Allowing guests to scan a QR code and enter their billing information before starting a charge. They will then be automatically billed for the energy used. You will be in control of the cost per KW to the guest / visitor.

Reserve charging points for specific guests or staff during peak hours, then give the public access in the off-peak times. You'll be able to set a different price whether your charger is being used by staff or the public.

Use the back office software to monitor usage and billing. We support Google Pay, Apple Pay and multiple credit card options or you can use allocated RFID cards.

To find out more or to arrange a free site survey contact our EV team today.
