The Flexible Cabling System
For e-vehicles Loading Stations
Infrastructure
Easee chargers also available from iDACS

Flexible and extendable infrastructure for your parking. The Woertz flat cable system allows you to install the infrastructure first and add chargers as your need for charging stations grows.

No cable interruption,no stripping, no special tools and no phase crossing mistakes!
Add a branching box anywhere along the flat cable at anytime, quickly and simply, as tenants / users move to an electric vehicle.

Available from Woertz

woertz

1 Install infrastructure   **3** Expand installation

2 Charging stations *

1 install infrastructure

The Woertz flat-cable system allows investment in shared infrastructure to make EV charging available to all residents.

Having the infrastructure set up makes your housing cooperative more attractive.

2 charging stations

Install any charging station*, connect it to the flat-cable easily and without stripping nor interrupting the cable with a Woertz insulating piercing, IP 65, branching box.
The feeding box can be installed anywhere along the flat cable, also without stripping nor interrupting the flat cable.

3 expand installation

Scaling an existing installation requires no extra work or infrastructure investment, all along the installed length of the flat cable.

The electrician simply connects the new charging stations to the existing infrastructure.

Woertz 5g16 mm^2

efficient cabling for both power supply and distribution.

Product 5g16 mm^2		Article No.
Flat cable	iP65	49606
Junction box	iP65	49615
branching box	iP65	49616
cable end piece	iP65	49630
clamp		49634

- Cable end piece
  No. 49630 - IP65

- Clamp
  No. 49634

- Junction box
